Motivated and detail-oriented IT undergraduate with a strong foundation in programming and a passion for solving real-world problems through innovative solutions. A quick learner and collaborative team player, eager to apply technical skills and creativity to contribute to impactful projects during an internship role.

BSc (Hons) Information Technology **2022-2026**
Sri Lanka Institute of Information Technology (SLIIT)

Software Engineer Intern - Phrasecode
Mar 2025 – May 2025
Remote work

Developed a Land Development System using React and Konva as part of a university project. The system features interactive land boundary drawing, real-time area and distance calculations, and automated tree placement with growth simulation. Included tools for environmental analysis, buffer zone management, and export/import functionality to support accurate agricultural planning and visualization.

Technologies used - MongoDB, Express.js, Node.js, React.js, Postman

Developed Mr. Automotive, a Vehicle Service Management System using the MERN stack, as part of a university project. The system includes responsive search functionality, automated report generation, and email notification features. Conducted comprehensive API testing with Postman and implemented unit testing using Jest and the React Testing Library to ensure robust functionality and optimal performance.

Technologies used - MongoDB, Express.js, Node.js, React.js, Postman

ExideGPT is an AI-powered chatbot that provides expert advice on Exide batteries for cars, boats, and industrial use. With a modern, user-friendly interface, it allows users to ask questions and receive instant, accurate answers, improving customer service in the battery industry with fast and reliable support.

Technologies used - Next.js, TypeScript, Tailwind CSS, LangChain, OpenAI, Puppeteer, Astra DB
